

GTCO Roll-Up II Digitizer 12 Month Warranty on Tablet

The Roll-Up II uses the latest version of TabletWorks (10.9) and is compatible with the latest operating systems:

- Windows 95/98/XP/Vista/7

The Roll-Up II works with any Takeoff Software or a QuikRuler I Module but requires a Legacy Kit to operate with the QuikRuler III.

The QuikRuler III Module can be purchased with a Legacy Kit to operate with a refurbished Roll-Up II Digitizer.

The difference between a Roll-Up II and Roll-Up III is that the Roll-Up II connects to a computer via the serial port and requires a power supply and the Roll-Up III connects via the USB port. However, a USB to Serial Adaptor can be used to connect the Roll-Up II via USB. The technology is also slightly different but this is not apparent by the user. The end of the control Roll-Up II controller panel contains three input ports; 1 for the power, 1 for the pointer/transducer, and one for the serial cable which connects to the computer. The Roll-Up III controller panel contains four input ports; the same three as the Roll-Up II and an extra port for the USB cable.
